CVH Series

Check Valves

The CVH Series Check Valves are engineered for a competitive price with no compromise of quality and performance to meet the growing requirements of instrumentation valves. The function of this valve series is to maintain system integrity by preventing back flow of a wide variety of fluids over a broad range of pressures.

Features & Specifications

- Rapid response
- Resilient o-ring seat provides cushioned, noise-free closing and zero leakage
- Floating o-ring design: o-ring is continually cleaned so contaminants do not prevent sealing
- Various materials of construction can be used with any liquid or gas service
- Various end connections can be assembled in any system or application
- Spring-loaded poppet can be mounted in any orientation
- Full flow with minimal restriction for maximum Cv rates
- Virtually maintenance free for maximum dependability
- Pressures up to 6000 psig (414 bar)
- Cracking pressure range is 0.5 to 20 psig (0 to 1 bar) $\pm 10\%$
- Flow up to 7.4 Cv maximum
- Greater than 100,000 life cycles
- Special High Tolerance NPT Thread

Technical Data

Body Material*	316 stainless steel, Monel® R-405, Hastelloy® C-276
Operating Pressure Range	0 to 6000 psig (414 bar)
Temperature Range**	-65° F to +550° F (-54° C to +288° C)
Cv factors	0.32 to 7.4
Cracking Pressure Range	0.5 to 20 psig (0.035 to 1.379 bar) $\pm 10\%$
Leakage	External: zero Internal: Soft seat = zero
Connection sizes	1/8" to 1"; 6mm to 25mm
Life Cycles	In excess of 100,000 cycles

* Consult factory for other materials

** Limited to +400° F (204° C) for 3/4" / 12 mm sizes and higher

For Your Safety

It is solely the responsibility of the system designer and user to select products suitable for their specific application requirements and to ensure proper installation, operation, and maintenance of these products. Material compatibility, product ratings and application details should be considered in the selection. Improper selection or use of products described herein can cause personal injury or property damage.

Gyrolok® is a registered trademark of HOKE Incorporated.
Monel® is a registered trademark of Special Metals Corporation.
Hastelloy® is a registered trademark of Haynes International, Inc.
Kalrez® and Viton® are registered trademarks of DuPont Dow Elastomers.

XVH Series

Excess Flow Valves

XVH Series Excess Flow Valves act as flow switches that automatically close when a flow spike occurs, preventing uncontrolled release of system fluid. The XVH Series is available in automatic and manual reset versions, depending on system requirements. Automatic reset XVH Series have an “anti-clog” wire which increases reliability by preventing a build up of system fluid in the bleed port. The XVH Series are high pressure (0 to 6000 psig [414 bar]), high performance, quick acting, zero leakage, low maintenance excess flow valves that will help provide a reliable and safe working environment.

- Lower cost
- Versatile
- Reliable
- Safety
- Flexible

Features

Automatic reset

- The bleed vent allows the valve to automatically reset

Manual reset

- Zero leakage: the valve must be manually reset

2-piece design

- Allows for simple spring and seal maintenance

O-ring or metal seat

- Can be used with any liquid or gas service

Various body materials

- Can be used with any liquid or gas service

Various end connections

- Can be assembled in any system or application

Spring-loaded poppet

- Can be mounted in any orientation

Anti-clog wire

- Prevents clogging of bleed port
- Special High Tolerance NPT Thread

Technical Data

Body Material*	316 stainless steel, brass, Monel®, Hastelloy® C-276
Temperature Range	–320° to +900° F (–196° to +482° C)
Operating Pressure	Zero to 6000 psig (414 bar)
Leakage Rate	• External: zero leak • Internal soft seat: zero leak
Flow/Trip Point Ranges	Low, standard/low, medium, and high

excess flow valves

XVH Series

Function

Excess Flow Valves are designed to limit flow of fluid to a predetermined rate. When flow reaches a predetermined rate the poppet will close, limiting or stopping flow. When pressure is equalized across the valve, the poppet will reset to the open position.

Open Position

The spring holds the poppet in the open position during normal flow. When flow increases to the predetermined rate or trip point, the poppet will close.

Manual Reset

The poppet will remain in the tripped position with zero leakage and zero flow until pressure is manually equalized across the poppet. When the pressure becomes equal, the spring will then reset the poppet to the open position, allowing normal flow.

Tripped Position

Automatic Reset

The poppet will remain in the tripped position until system pressure becomes equal across the poppet. The bleed orifice in the poppet will allow the pressure to slowly equalize across the valve if the downstream line is closed or repaired. When the pressure becomes equal, the spring will then reset the poppet to the open position, allowing normal flow.

Materials of Construction

Part	Standard Material (others available on request)
1 Body* (outlet)	316 stainless steel
2 End adapter* (inlet)	316 stainless steel
3 Poppet*	316 stainless steel
4 Spring*	302 stainless steel or Inconel***
5 Anti-clog wire*	302 stainless steel
6 Front ferrule*	316 stainless steel
7 Rear ferrule	316 stainless steel
8 Nut	316 stainless steel
9 O-ring band	Anodized aluminum
10 Part number band	Anodized aluminum

* Wetted component

XVH Series

Trip Points/Ranges

XVH valves operate properly when they allow normal system flow and then close/trip at the increased flow rate. XVH series have 3 sizes of valves and 6 trip points/ranges per size. A valve is specified correctly when the trip point or trip range selected accommodates the application. The graphs below are flow curves that show trip points for liquids and trip ranges for gases. Liquid flow curves show specific flow rate trip points at specific pressure differentials. Gas flow curves show flow rate trip ranges at specific inlet pressures. Due to the compressive nature of gases, a minimum of 100 psid is required for gas applications.

Water Flow Rates: Low

Using the graphs below, look up your desired normal flow rate (including normal surges) on the X axis. Read vertically on the graph to the Cv line and then left on the graph from the Cv line to the pressure drop. Then select a valve and trip range higher than normal expected flow. For example: With a normal flow rate of 1010 cc/minute, a 1/4" valve (XVH-4) will have a pressure drop of approximately 1 psi. Selecting a 1/4" valve with a medium trip option, the valve will close when the flow reaches 1.5 GPM and a pressure drop of approximately 2.2 psi.

Water Flow – Low Inlet/Outlet Size = 1/4"

Water Flow – Low Inlet/Outlet Sizes = 3/8", 6mm

XVH Series

Water Flow – Low Inlet/Outlet Sizes = ½", 8mm

Air Flow Rates – Low

Using the graphs below, find the intersection of your normal flow rate (including normal surges) and the inlet pressure of the excess flow valve. From there, move to the right on the graph and select a valve with a trip range greater than your normal flow. For example: reading the chart below, if normal flow is 8 scfm and the inlet pressure is 400 psig, you would select a ¼" valve with a high trip range.

Air Flow – Low Inlet/Outlet Size = ¼"

XVH Series

Air Flow – Low Inlet/Outlet Sizes = 3/8", 6mm

Air Flow – Low Inlet/Outlet Sizes = 1/2", 8mm

XVH Series

Water Flow Rates: Standard

Using the graph below, look up your desired normal flow rate (including normal surges) on the X axis. Read vertically on the graph to the Cv line and then left on the graph from the Cv line to the pressure drop. Then select a valve and trip range higher than normal expected flow. For example: With a normal flow rate of 1 GPM, a ¼" valve (XVH-4) will have a pressure drop of approximately 6.5 psi. Selecting a ¼" valve with a medium trip option, the valve will close when the flow reaches 1.5 GPM and a pressure drop of approximately 15 psi.

Water Flow – Standard Inlet/Outlet Sizes = ¼", ⅜", ½", 6mm, 8mm

Note:
XVH-4 is inlet/outlet size of ¼"
XVH-6 is inlet/outlet size of ⅜", 6mm
XVH-8 is inlet/outlet size of ½", 8mm

Air Flow Rates – Standard

Using the graphs below, find the intersection of your normal flow rate (including normal surges) and the inlet pressure of the excess flow valve. From there, move to the right on the graph and select a valve with a trip range greater than your normal flow. For example: reading the chart below, if normal flow is 20 scfm and the inlet pressure is 200 psig, you would select a ¼" valve with a medium trip range.

Air Flow – Standard Inlet/Outlet Sizes = ¼", 6mm, 8mm

XVH Series

Air Flow –Standard Inlet/Outlet Sizes = 3/8", 10mm, 12mm

Air Flow –Standard Inlet/Outlet Sizes = 1/2", 14mm

6100 & 6200 Series

Ball and Poppet Check Valves

Features

- O-ring seat provides leak-tight shutoff
- Internal design guides flow around or inside spring, not through coils, when valve is open
- All models are tested in production to assure a leak-tight body joint and seat
- Ball and poppet designs are available as standard
- Ball type provides effective leak-tight closure with minimum flow resistance
- Poppet models provide large flows with a minimum of chatter and fluctuation
- Valves are available with various cracking pressures, from $\frac{1}{8}$ to 25 psig (0 to 2 bar).
- 2-piece body permits interchangeability of end connections
- Special High Tolerance NPT Thread

Applications

- Prevents reversed flow to protect solenoids, regulators, and pumps
- Locks pressure in hydraulic cylinders
- Low pressure inline relief valve
- Vent valve to purge a system

Other Differential Cracking Pressures

Cracking Pressure	Digit	All check valves except $\frac{3}{8}$ " and $\frac{1}{2}$ " female NPT models can be furnished with other than the standard 2 psig cracking pressure. To order, change the fourth digit ("3") of the desired valve part number. Example: 6115G4B is a 6100 Series brass ball check valve with $\frac{1}{4}$ " Gyrolok® ends and a 10 psig cracking pressure
$\frac{1}{2}$ psig	-1	
10 psig	-5	
25 psig	-6

691F Series

High Flow Poppet Check Valves

Features & Benefits

- Prevents back flow
- Protects valuable equipment
- 316 stainless steel components
- Gyrolok® compression ends provide leak-free, reusable connections
- Recommended for severe service, including CNG applications:
 - High Cv flow rates
 - Blowout-proof o-ring design
 - Withstands high opening shocks without damage
- Special High Tolerance NPT Thread

Technical Data

Body Material	316 stainless steel
Operating Pressure	5000 psig @ 70° F (345 bar @ 21° C)
Operating Temperature Range	-65° F to +275° F (-54° C to +135° C)
Differential Cracking Pressures	½ psig to 50 psig (0 to 3 bar)
Cv Factors	0.620 to 6.0

R6000 Series[®]

Right Angle Relief Valve

Available in low, medium, high and extra high pressure models, R6000 right angle relief valves provide users with high accuracy and consistency of cracking and reseal pressures. Furthermore, narrow pressure ranges (cracking pressures) for each model can be factory pre-set according to customer specifications. PED certification and CE marking are standard for all models. All R6000 relief valves are offered with multiple end connections to ensure application versatility.

Features & Benefits

Low Pressure (5 – 550 psig)*

Zero friction poppets

- Increases accuracy of cracking pressure and reseal pressure.
- Improves consistency of cracking pressure and reseal pressure.

Encapsulated Seat Seal

- Maintains small contact surface area.
- Protects seat from erosion due to flow.

Raised seal lip on poppet minimizes contact with seat, eliminating friction and preventing overstressing of the O-ring

6 pressure spring ranges improve accuracy

Caps and bonnets are pre-drilled for lockwire

Multiple end connections available

- Special High Tolerance NPT Thread

High Pressure (150–6000 psig)

3 models available:

- Medium (150–2500 psig)—6 spring ranges improve accuracy
- High (150–5000 psig)—7 spring ranges improve accuracy
- Extra High (5000–6000 psig)—one spring

Delta stem seal design prevents friction which increases accuracy of cracking pressure and reseal pressure.

Balanced poppet design allows cracking pressure to stay the same regardless of backup pressure.

Orifice sizes: 0.082", 0.094", 0.188"

Multiple end connections available.

Optional manual override handle

** Back pressure affects cracking pressure on low pressure version*

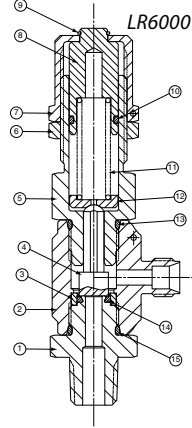

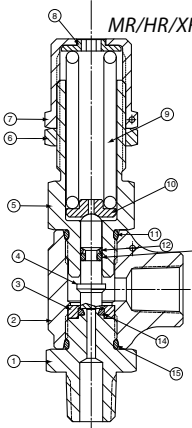

Typical Applications

- Beverage dispensing equipment
- Gas pilot plants
- Petrochemical test labs
- Offshore oil platform heating lines
- Pharmaceutical sterilization and packaging systems

**** Customer can request a specific cracking pressure when ordering. To specify, add the cracking pressure as -PSIG (not BAR) after the M for Manual Override (if no override, add value after "H"). Otherwise, the factory sets the valve at the nominal midpoint of the cracking pressure range selected. Valves with specific cracking pressure include standard factory installed lockwire.

R6000 Service Kits

LR Kit includes: end seat-to-body O-ring, bonnet-to-body O-ring, and bonnet seal O-ring.

MR/HR/XR Kit includes: end seat-to-body O-ring, bonnet-to-body O-ring, seat O-ring, and Delta seal. Replacement of Delta seal requires use of installation tool and resizing tool. Consult factory for details.

To Order, add K to front of valve part number (example: KLR6024-2MP-AH).

For Your Safety

It is solely the responsibility of the system designer and user to select products suitable for their specific application requirements and to ensure proper installation, operation, and maintenance of these products. Material compatibility, product ratings and application details should be considered in the selection. Improper selection or use of products described herein can cause personal injury or property damage.

6600 Series

Bleed Valves

HOKE 6600 Series bleed valves allow for quick, easy manual bleed-off of system pressure. These valves come in a variety of configurations, including straight, elbow, union, and tee.

Features

- Compact installation
- 316 stainless steel construction
- Straight, union, elbow or tee flow configurations
- Integral tube ends
- Special High Tolerance NPT Thread

Benefits

- Safe
- Reliable
- Gyrolok® fitting connections eliminate pipe thread leak paths

Typical Applications

- Air, hydraulic systems, or natural gas
- Venting or purging of liquids and gases
- For use on instrument manifolds

Technical Data

Body Material	316 stainless steel
Maximum Operating Pressure	6000 psig @ 70° F (414 bar @ 21° C)
Operating Temperature Range	-40° F to +600° F (-40° C to +316° C)
End Connections	¼", ⅜", ½" Gyrolok®
Average Operating Torque @ Maximum Operating Pressure	40 in-lbs

Operating Instructions

- Valve is operated by turning the bleed port nut with a wrench. Use appropriate back-up wrench to hold body, while turning bleed nut.
- As the bleed nut is turned, pressure forces the ball off the seat. Pressure is vented through a hole drilled in the nut, angled back toward the body of the valve. Make sure flow is directed away from user.
- Those using the valves should wear protective clothing, especially goggles.
- No attempt should be made to repair or dismantle the valve.

6631 Series Directed Bleed Valves

HOKE's 6631 Bleed Valve allows the user to direct the bled fluid as desired. The valve can be ordered with a 1 1/2" (38mm) press fit handle by adding an "H" suffix to the valve part number (e.g., 6631H4YH). To operate, simply turn the 7/16" nut with a wrench or the optional loose fit stainless steel bar handle, part number 59-878. Please consult your local distributor for details.

Caution: If the vented fluids are not going to be contained, the vent tube must be positioned at installation so that it is directed away from the operating personnel.

Technical Data

Body Material	316 stainless steel
Maximum Operating Pressure	5000 psig @ 70° F (345 bar @ 21° C)
Operating Temperature Range	-20° F to +425° F (-29° C to +218° C)
Orifice	0.125 (3.2mm)

Benefits

Safety

- O-ring packaging prevents leakage through stem threads

Reliability

- All valves are tested for bubble-tight leakage

Typical Applications

- Venting or purging of liquids and gases
- For use on gauge valves

6300 Series

Micron Filters

Features

- Choice of in-line, removable, or bypass filter models
- NPT female and Gyrolok® tube fitting connections
- Variety of micron filtering ranges from 2 to 55μ
- Filter elements are available in 316 stainless steel
- Filter elements are easily replaced
- Bypass models permit purging and sampling of process fluid
- Bodies available in brass and 316 stainless steel
- Special High Tolerance NPT Thread

Applications

- Trap foreign particles
- Protect sensitive equipment
- System purging
- Pressure damper

How to Order

Select and specify filter by part number, according to desired connections and materials of construction. Be sure to add the identifying digit of the desired filter element to the filter part number from the chart below. To order a 316 stainless steel in-line type, 1/8" NPT female filter with an element range of 5 to 9μ, add "-2" (e.g., 6312F2Y). To order a filter without a filter element, insert the number "-0" in the model number desired (e.g., 6310F2Y).

6310 Series: In-line Filters

1500 Series

Forged Body Toggle Valves

Featuring a simple, reliable design concept, this low-maintenance valve is well suited for a wide variety of applications. The toggle handle provides easy on-off operation and visual indication of flow.

Benefits

Safety

- Handle gives visual indication of stem position

Instant control

- Toggle handle provides instant on-off control

Vacuum service

- Elastomeric seals provide leak-tight sealing under positive pressure and vacuum conditions

Reliability

- All valves are tested for bubble-tight leakage at both seat and packing

Installation variety

- Choose from a broad selection of male NPT, female NPT and HOKE Gyrolok® tube fitting connections

Handle options

- Color-coded handles are available for identifying system fluids

Panel mounting

- Panel mounting is standard on all models

Typical Applications

- Chromatographs and mass spectrometers
- Manometer shutoff valves
- Air lines
- Instrument panels

6800 Series

Gauge Valves

Features

- Corrosion-resistant bar stock 316 stainless steel bodies
- Packing below stem threads prevents contamination and wash away of thread lubricants to assure long valve life
- Hardened 17-4 PH 2-piece, non-rotating stem point minimizes seat galling and provides an excellent metal-to-metal seat for positive shutoff
- Low profile bonnet assembly and large diameter stem reduces damage to bonnet and stem assembly
- Roll pin locks bonnet in the valve body to prevent accidental removal
- Choice of 5 $\frac{3}{8}$ " long body for standard process use or 7 $\frac{3}{8}$ " body for insulated piping applications
- Three outlets meet individual gauge requirements
- Polyethylene cap protects stem and bonnet from external damage
- Rugged large handle provides easy grip and control
- All models are stamped with maximum operating pressures on valve body
- High temperature packing is available on special order
- Special High Tolerance NPT Thread

CIRCOR Instrumentation Technologies

CIRCOR Instrumentation Technologies (CIT) is a product group of CIRCOR International (NYSE: CIR), specializing in fluid process control solutions with orifice sizes typically up to 1". Our main product lines include ball, needle, packless, diaphragm, solenoid, and metering valves, pressure regulators, quick couplers, Gyrolok® compression tube fittings, and fully integrated sampling systems.

CIT markets primarily to the petrochemical, refining, power generation, food and beverage, semiconductor, and pharmaceutical industries, and to OEM's. CIT separates itself from the competition by offering highly engineered components manufactured to exacting standards and a variety of custom options.
